

SETI PC Report to IAA Commission 1 - September 2022.

A new SETI PC executive was elected in September 2021. The new PC chair is Prof. Michael Garrett (Univ. of Manchester) with co-chairs Profs. Carol Oliver and Andrew Seimion. Lori Walton is the secretary. Dr. Claudio Maccone (formerly PC chair) was appointed as PC member emeritus. A PC meeting was held in Dubai (IAC 2021) and this included remote participation via zoom. The chair's notes for this meeting are available at: [removed]

[removed]

The main activity has been to consolidate the PC membership - the field of SETI is undergoing a major rejuvenation with privately funded programmes such as Breakthrough Listen also having an impact globally around the world. Rapid growth of the PC membership in previous years (there are now ~ 80 members) led to some administrative confusion - Lori Walton is sorting this out with support from the IAA Office in Paris.

The PC is looking forward to seeing the new Terms of Reference (ToR) for Permanent Committees currently being finalised by the IAA Board of Trustees. We have provided input to Les Tennen on this matter, and we prefer not to appoint new PC members until the new ToR are known. We note that there is significant international pressure from many active in the field to join the PC.

Issues recently addressed by the PC included our relation to topics such as UAP (Unidentified Aerial Phenomena) - with our current ToR, the PC's focus firmly remains on the search for techno-signatures beyond the Earth's atmosphere. The PC continues to support discussions and new developments associated with the SETI protocols, in particular the post-detection protocols.

The next PC meeting is scheduled for IAC 2022 in Paris - the Paris Conference Centre, Room E05A, Tuesday, 20 September 2022, 10:00-13:00 local time. We also aim to facilitate remote participation via zoom.

Mike Garrett, SETI PC chair.
